These features create a diverse set of science targets that meet the challenge of the mission objectives, described earlier in this paper. The primary function of the PSG is to advise the Project on optimization of mission science return and on resolution of issues involving science activities. This includes but is not limited to observations of landscape that enable understanding of past and present geologic processes; studies of frost, ice, and related processes; documentation of atmospheric and meteorological events; and helping to facilitate rover operations, analytical laboratory sampling, contact instrument science.

Kozyrev, I. For a full frame, the maximum frame rate is between 3. However, as the MSL Project continued to study the final four landing sites it became increasingly clear that all landing

sites would be deemed satisfactory for landing given engineering requirements. Wales, V. Nor does it have the ability to image microorganisms or their fossil equivalents. MARDI color adjustment example from the 35th frame acquired during descent anomaly also resulted in the ExoMars Schiaparelli module turning off thrusters too soon, while it was still a few kilometres above the surface.
