The second section compares human and nonhuman bones, categorized by type of bone, and includes most of the major bones in humans and nonhumans. Archaeologists often make initial determinations about whether skeletal remains are human or not in the field, although more detailed analyses often take place in the laboratory, particularly for bulk bone recovered during excavation. Intended as a field guide for investigations and a lab guide in gross anatomy and skeletal specimen studies, this atlas provides easy and rapid identification of bone material.

Three case studies on palaeopathology are presented. Filled with more than annotated, crisp photographs, this handy guide enables law enforcement, medicolegal death investigators, forensic anthropologists, and others in the field and in the lab ready access to the information needed to help solve the mystery of discovered bones.
