First Online: 09 November Bubbling gas through the discharge region greatly increases radical density in the plasma, as for example observed by Sun et al. For the hybrid positive pulsed DBD spray and falling water film reactor of Figure 10g, the energy efficiency of rhodamine B decomposition enhanced with increasing water flow [].

Effects of metastable species in helium and argon atmospheric pressure plasmas. The concentration of pre-discharge in the pores of the ceramic layer enhances the electric field strength on the electrode surface [68]. Lionel Mercury.

Low temperature kinetics and energetics of the electron and hole traps in irradiated polymers. The influence on reactor efficiency for organic decomposition will be illustrated with examples from literature. The energy efficiency of phenol oxidation in their system, depicted in Figure 4e, was comparable to the results obtained in pulsed corona discharge systems.
